

SAPHENEIA SIGNS NEW U.S. CUSTOMERS TO CLARITY™ CT

Clarity™ CT Solution REDUCES EFFECTIVE DOSE BY UP TO 50%

September 22, 2010 – Sapheneia, a global imaging services company, today announced the signing of 3 new customers to a growing list of hospitals, imaging centers and clinics who use the **Clarity CT Solution** to enable material reductions in the medical radiation exposed to patients.

Joining Sapheneia's growing customer base are: Watson Clinic of Lakeland, FL, Zilkha Radiology of East Islip, NY, and Inova Alexandria Hospital of Alexandria, VA. Each of these facilities licensed **Clarity CT** to reduce the effective dose on CT exams across a variety of different makes and models of CT scanners. Initiating the sale at Zilkha Radiology was Merry X-Ray Corporation, and at Inova Alexandria, X-Ray Vision. Both Merry X-Ray and X-Ray Vision are distribution partners for Sapheneia.

“A growing number of healthcare institutions are recognizing the value of **Clarity CT** to dramatically lower medical radiation exposed to patients and the importance of continuous efforts to improve patient safety through dose reduction initiatives. As regulatory requirements for dose monitoring and reduction continue to gain momentum at the state and federal levels, we are well positioned to assist healthcare providers with proactively addressing these regulations,” states Hans Grahn, Ph.D., CEO, Sapheneia.

About Sapheneia

Sapheneia is a global, ISO-certified imaging services company specializing in diagnostic and analytical image processing solutions. Sapheneia's mission is to provide medical image optimization products to promote higher diagnostic confidence, greater patient and medical staff safety, and improved cost-effectiveness of medical imaging. Sapheneia's **Clarity CT Solution** enhances the diagnostic quality of images based on settings optimized by the radiologist. This enables lower radiation dose exposures while simultaneously providing radiologists with the diagnostic confidence previously available only when reading the same images at full dose.
